

This demo shows how an AI agent helps with dating:
creating a profile, finding compatible matches, facilitating
conversations, and even guiding a relationship to marriage
— all powered by AI-native matching algorithms.
BigT.AI — Dating — AI-Native Matchmaking to Marriage

1. Create Your Dating Profile

The AI helps you build a detailed, authentic dating profile that showcases your personality, interests, and what you're looking for.

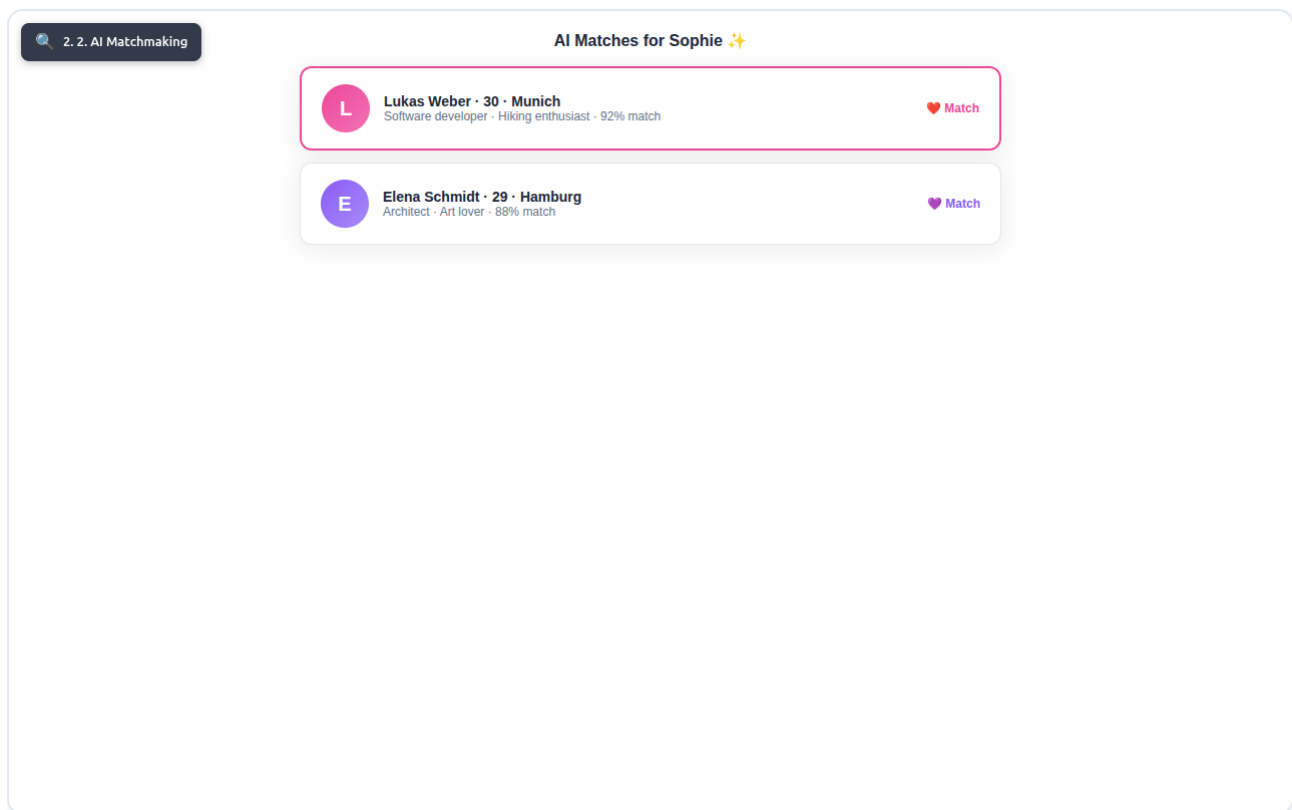

Your profile includes:

- Personal description and interests
- Photos and lifestyle preferences
- Compatibility criteria
- Relationship goals

2. AI-Powered Matchmaking

The AI analyzes your profile and finds highly compatible matches based on personality, interests, values, and location.

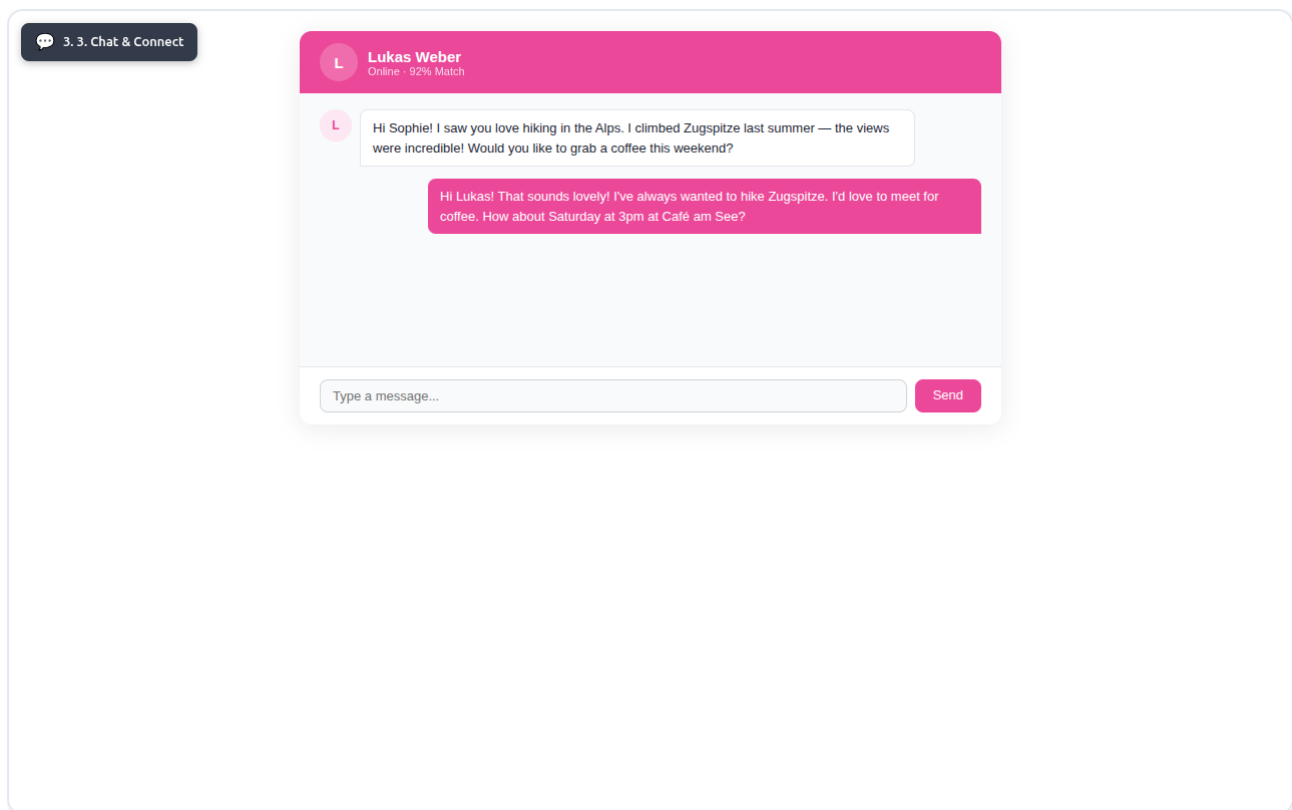

"Lukas Weber · 30 · Munich — Software developer, hiking enthusiast, 92% match" "Elena Schmidt · 29 · Hamburg — Architect, art lover, 88% match"

The AI's matching engine considers hundreds of data points to find your ideal partner — learning from every interaction to improve recommendations.

3. Chat & Connect Naturally

The AI facilitates natural conversation starters based on shared interests, making it easy to break the ice.

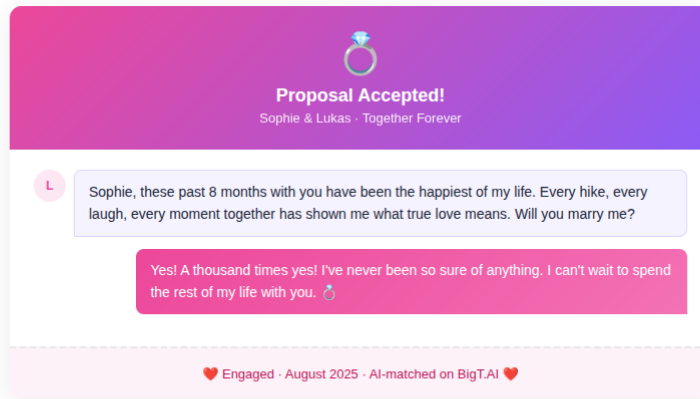

"Hi Sophie! I saw you love hiking in the Alps. I climbed Zugspitze last summer — the views were incredible! Would you like to grab a coffee this weekend?"

The AI suggests personalized opening messages that reflect genuine shared interests, leading to more meaningful connections.

4. From Match to Marriage

The AI supports the entire relationship journey — from first date to lifelong commitment.

"Sophie, these past 8 months with you have been the happiest of my life. Every hike, every laugh, every moment together has shown me what true love means. Will you marry me?"

What You Get

1. AI-crafted dating profile – authentic, detailed, attractive
2. Smart matchmaking – compatibility analysis across personality, interests, values
3. Natural conversation starters – personalized icebreakers based on shared interests
4. Relationship guidance – AI support from first date to commitment
5. Full journey automation – from profile to proposal, AI-native end-to-end
